Broadcast 2000 ha muerto viva Cinelerra (13116 lectures)
 Per **Carlos Cortes Cortes**, *carcoco* (http://bulma.net/~carcoco/)
Creado el 10/06/2002 23:48 modificado el 10/06/2002 23:48

Recientemente no enteramos que **Heroine Virtual** el equipo de desarrollo de **Broadcast 2000** habia parado el desarrollo del mismo por *diversos motivos*, la buena noticia es que han reemplazado este potente sistema de edición de video profesional por **Cinelerra**, que parece será incluso más potente que **Broadcast 2000** ...

Tal y como he podido rescatar de la web antigua gracias a **google**, parece que recibieron fuertes presiones externas[1] que los forzaron a detener definitivamente el desarrollo de **Broadcast 2000**:

After a long period of deliberation on the matter, Broadcast 2000 has been removed from public access due to excessive liability.

In recent months the line between warranty exemption and liability has become increasingly blurred as more companies have liquidated and more individuals have begun to seek compensation.

We've already seen several organizations win lawsuits against GPL/ warranty free software writers because of damage that software caused to the organization. Several involved the RIAA vs mp3/p2p software writers. Several involved the MPAA vs media player authors. You might say that warranty exemption has become quite meaningless in today's economy.

While not related to either of these cases the distribution of Broadcast 2000 enhanced to unacceptable levels the risk of an individual experiencing significant financial damage due to the extremely expensive nature of high end video production and the high risk inherent in professional video business marketing. This has forced us to reconsider our liability protection at this time. We still plan to continue offering minor works for download and in the coming years, as the liability issues surrounding open source software are resolved, we expect to issue newer major works.

Pero ahora nos obsequian con esta herramienta **GPL** para hacer peliculas en linux de la misma forma que los profesionales: Cinelerra[2], estamos de enhorabuena ;-)
Cinelerra is a complete audio and video production environment for Linux. It is designed to replace Broadcast 2000.
